

Cork Can Holder

Written By: maxwell

TOOLS:

- [a hand \(1\)](#)

PARTS:

- [Paper clips \(10\)](#)
- [wine cork \(1\)](#)

Step 1 — Cork Can Holder

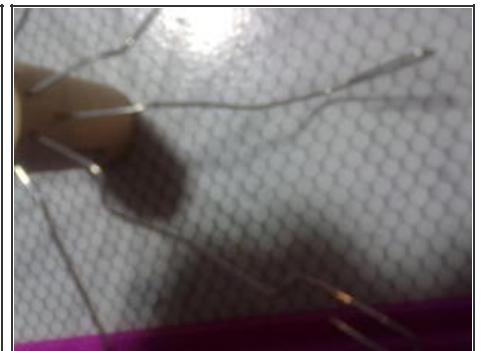

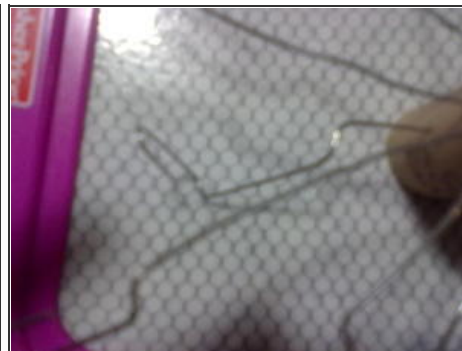

- Bend the paper clips as shown. Use as many you need for this project.

Step 2

- Insert the paper clips around the cork so that it looks something like this.
- It takes a bit of care to push the paper clips so they won't bend. If that happens, it's OK; just straighten them out again.

Step 3

- If your cork stand falls over, bend a paper clip in an "L" shape to make a stabilizing foot.
- This shape is also helpful when building the arms that come out to hold the small dish that you will put on top of the stand.

Step 4

- Enjoy the holder you made using things in your house!
- I put a Pepsi can on it to show you how well it works.
